

Do You Drive a 3CR12 Car?

The canopies used on enclosed sets are made from galvanized steel and are powder coated. This is sufficient and will not corrode with proper maintenance. Using 3CR12 steel instead will increase costs for a small amount of extra protection.

- Maximized service access.
- Digital control system
- Galvanized canopies
- High ambient cooling capabilities
- They are designed to minimize noise and maximize ambient clearance with air.
- Gas spring assisted side doors (3 Series)
- High ambient cooling capabilities
- Our sound attenuated enclosures are fabricated from 1.5/2.0mm hot dipped galvanized steel and pre-treated before powder coated using polyester powder to a thickness between 60-100µm. This minimizes the risk of dust and moisture ingress.
